## Daily Feeding Directions

<u>Weight</u>	<u>Daily Amount to Feed*</u>
5 lb	½ - ¾ cups
10 lb	¾ - 1¼ cups
15 lb	1 - 1½ cups

\*Amounts based on a standard 8 oz measuring cup.

## Adult Feeding Guidelines

This product should be fed dry. Offer ½ cup to 1½ cups to your cat daily. Pregnant or nursing cats and growing kittens may require 2-3 times the suggested amount. Adjust to your cat's needs accordingly.

## Kitten Feeding Guidelines

Start feeding dry food moistened with water or milk at about 4 weeks of age. Gradually decrease added liquid until fed dry. Feed your kittens all they can eat in three hours twice a day.

**Important:** Water is essential to your cat's body functions. Provide a dish of fresh, clean water at all times. Cats' appetites vary and it is not unusual for them to lose their interest in food occasionally. In most instances, it's just their way of adjusting their food intake to energy expenditure. They normally resume their feeding habits in a day or so. However, should they refuse food beyond this period, it could be a sign of approaching sickness and you may wish to consult your veterinarian.
